EDUCATION

McMaster University

Bachelor of Applied Science, Computer Science

Hamilton, ON

Sept 2021 — May 2026

- Cumulative GPA: Summa Cum Laude | Dean's Honor List
- Relevant Coursework: Human-Computer Interfaces, Data Structures, Algorithms, Databases, Operating Systems, Applications of Machine Learning, Discrete Mathematics

WORK EXPERIENCE

Software Engineer and Research Coordinator

June 2024 — July 2025

Healthcare Systems Research & Analysis

Waterloo, ON

- Shipped user-facing tooling on top of an ML classification service by integrating multiple internal systems behind a documented REST interface, translating research code into a stable product analysts actually used
- Partnered directly with non-technical stakeholders across 8 groups to turn ambiguous requirements into clear specs, then delivered reusable, well-documented modules that **automated 90% of prior manual work**
- Led a team of 4 engineers, balancing competing priorities and deadlines across parallel workstreams and shipping every milestone on time

Machine Learning Analyst and Research Assistant

May 2023 — May 2025

McMaster University - Department of Computing and Software

Hamilton, ON

- Built internal tooling and evaluation dashboards to make model behavior legible to non-ML researchers, translating technical results into visualizations and reports for a mixed-audience team
- Wrote and maintained clear technical documentation, examples, and reusable Python utilities under Dr. Douglas Down, enabling other researchers to extend the work independently

PROJECTS

Kollec App (kollec.app)

Sept 2025 — Apr 2026

- Co-developed a secure, customer-facing card-collection application using **Next.js**, **React**, **TypeScript**, and **Tailwind CSS**, shipping to real users and iterating on their feedback
- Built a component library of reusable, accessible UI primitives and a design system that kept the app visually consistent while accelerating feature delivery across a team of 7
- Integrated multiple established APIs — payment, image recognition, and internal services — applying system-integration patterns (adapters, retries, error boundaries) so failures degrade gracefully in the UI
- Owned features end-to-end from technical design through implementation, automated tests, code review, and launch, meeting deadlines across a full product cycle
- Instrumented client-side telemetry to observe real user behavior and used it to drive UX iteration, prioritizing improvements by measured customer impact

Personal Website (ishpreetnagi.com)

July 2024 — Present

- Built a responsive, single-page portfolio using **React**, **Astro**, and **Tailwind CSS**, with reusable components, accessible markup, and mobile-first layout
- Optimized build pipeline, image loading, and runtime rendering to achieve a **95+ Lighthouse score** across performance, accessibility, best practices, and SEO
- Wrote clear technical documentation and a maintainable content structure so future updates are trivial

Technical Executive, DeltaHacks 10 (github.com/deltahacks/landing-10)

Aug 2023 — May 2024

- Shipped the official DeltaHacks 10 site to **1000+ applicants** under a hard deadline, coordinating across design, ops, and sponsorship teams
- Optimized build pipeline and bundle efficiency with Astro and TypeScript; used dynamic content and responsive design to **increase user attention by 25%**

SKILLS

- **Languages:** TypeScript, JavaScript, HTML, CSS, Python, Java
- **Frameworks & UI:** React, Next.js, Astro, Tailwind CSS, Chakra UI, Material UI, responsive & accessible design, component-driven architecture
- **APIs & Integration:** REST APIs, system integration patterns, third-party API consumption, Prisma ORM, PostgreSQL
- **Tooling & Delivery:** Git, GitHub Actions (CI/CD), Docker, Vercel, Supabase, Jest / automated testing, code review, technical documentation, Lighthouse & web performance
- **AI in the Dev Loop:** GitHub Copilot, Cursor, Claude Code, OpenAI API, Claude API, LLM integration
